Funded by the Horizon 2020 Framework Programme of the European Union

This document is based upon work from COST Action Archaeological practices and knowledge work in the digital environment CA 15201, supported by COST (European Cooperation in Science and Technology)".

COST (European Cooperation in Science and Technology) is a pan-European intergovernmental framework. Its mission is to enable break-through scientific and technological developments leading to new concepts and products and thereby contribute to strengthening Europe's research and innovation capacities. www.cost.eu.

Archaeological Practices And Knowledge Work In The Digital Environment

ARKWORK is a transdisciplinary research network on archaeological practices and knowledge work in the digital environment.

ARKWORK brings together researchers, practitioners and state-of-the-art efforts to study archaeological practices, knowledge production and use.

ARKWORK brings you up-to-date knowledge on digital archaeological practices by **providing training** for early career investigators, **organizing events**, and **publishing research findings** for stakeholders involved in making, regulating, preserving, managing and using archaeological knowledge.

Currently both the European countries and the EU are making considerable investments in technologies, infrastructures and standards for all aspects of working with archaeological knowledge. **Critical understanding of how archaeological knowledge is produced and used** is necessary for understanding both its scientific and social impact.
